EXTREME FIRE RISK | **Lithium ion powered jump boxes are NOT to be used during jump start events on the Porsche Taycan.**

Use extreme caution with the green line near negative jump post.

Damage to the green air line may result in further damage to the vehicle's suspension.

Leave the outside 12-volt source connected for at least 5 minutes or until the dash cluster illuminates when pressing the power button on dash.

When the cluster illuminates, operational readiness has been restored and the vehicle can be disconnected from outside power.
